Lama Almutairi

Riyadh, Saudi Arabia – lama.abdulrahmana@gmail.com

SUMMARY

Experienced Software Engineer in developing and deploying technical solutions using emerging technologies and collaborating with cross functional teams. Proven in managing projects, mentoring interns, and delivering innovative AI solutions. Successfully demonstrated applications to stakeholders, clients, and engineers. Eager to learn and apply skills while seeking opportunities for personal and professional growth. Three things I care about are Mindset Growth, Networking, and Career Growth.

EXPERIENCE

Senior ML Engineer | HUMAIN *September 2025*

- Part of the Innovation and Intervention team for enhancing and maintaining Agentic AI pipelines.
- Diagnose and resolve issues in the Agentic AI pipeline for localization and intent classification.
- Build and optimize a multilingual Retrieval Augmented Generation (RAG) for enterprise search and retrieving organization policies.
- Work with cross functional teams (engineering, product, and business stakeholders) to define roadmaps, technical feasibility.

Software Engineer | SAMI *November 2022 – September 2025*

- Designed advanced AI models and algorithms for defense & security applications
- Integrated models for deployment.
- Utilized Docker to containerize AI applications, facilitating consistent deployment across different environments and improving scalability.
- Built and maintained ETL data pipelines for large-scale defense data processing using Kafka, MongoDB, and ElasticSearch.
- Trained and optimized AI models for performance and scalability using multi-GPU training, data parallelism.
- Developed a multilingual NLP model with over 83% accuracy in sentiment classification.
- Enhanced a multimodal language model (MLLMs) and vision language models (VLMs) for video moment retrieval.
- Analyzed defense needs to translate them into detailed technical requirements and documentation.
- Mentored and supervised intern engineers, providing guidance on AI projects.
- Managed AI projects through all phases using Agile methodologies and project management tools.
- Presented technical applications to stakeholders, highlighting tested solutions and recommending enhancements for scalability.

Data Science & AI T5 Bootcamp Trainee| SDAIA *September – December 2023*

- Gain experience in creating AI, and data driven solutions to address real world challenges.
- Apply data science and AI/ML techniques to develop applications.
- Collect, clean, and analyze data to uncover key insights for decision making.
- Create reports and dashboards to present findings clearly.
- Use predictive models and advanced analytics to forecast trends.

Software Engineer Intern | KACST *June – August 2022*

- Develop an intrusion detection system using Machine Learning and Deep Learning techniques.
- Build a machine learning model that detects network intrusion with **+95** accuracy.

Software Engineer Ambassador | Code for Girls *Mar – August 2022*

- Held a **2**-hour workshop on *Teachable Machine in Machine Learning* with **50+** attendants that aims to help people start their journey in machine learning by gathering data then train the model to classify image/sound and finally export the model to production.
- Wrote a blog on *Data Security* with **+200** read.
- Worked as an assistant instructor for **+20** hours to teach participants around age **12-28** the fundamentals of *Front Web Development*.
- Worked with small groups of participants to enhance the learning process.
- Helped participants complete their projects.

EDUCATION

King Saud University, Riyadh August 2022
Bachelor of science in Software Engineering *Cumulative* GPA: 4.75

SKILLS & TECHNICAL TOOLS

Skills: Research and Development, Project management, Reverse Engineering, Critical Thinking, Technical Demonstrations, Object Oriented Programming, Requirement Analysis, Agile Methodologies, Stakeholder Communication, Client Relationship, Finance Analysis, CI/CD.

Languages: Java, Python, Swift, JavaScript, NoSQL, SQL, HTML, CSS, JQuery, JSON, PHP.

Technologies: YOLO, Roboflow, Flask, FastAPI, Docker, Git, Jupyter Notebook, scikit-learn, NumPy, XCode, Visual Studio, Weka, Splunk, Eclipse, Agile, Pandas, Matplotlib. Firebase, MongoDB, Android Studio, GitLab.

CERTIFICATIONS

- Agentic AI — Udacity 2025
- Natural Language Processing — Carnegie Mellon University (CMU) 2023
- Mckinsey Forward Program — McKinsey & Company 2023
- Data Analyst Nanodegree — Udacity 2023
- Applied Data Science with Python Specialization — Coursera 2022
- Cybersecurity Incident Response Analysis at STC — STC | Misk 2022
- Introduction to Cybersecurity — Cisco 2022
- iOS & Swift - The Complete iOS App Development Bootcamp — Udemy 2022
